Summary

SDE specializing in high-throughput data systems and LLM-powered pipelines — distributed scraping infrastructure processing **20M+ URLs/day**, Kafka-driven multi-stage ETL across AWS and GCP, and end-to-end AI pipelines combining local ASR, map-reduce summarization, and RAG-based Q&A. Experienced in mobile API reverse engineering (Frida, Charles Proxy) and multi-LLM orchestration (LangChain, LangGraph, OpenAI, Agentic AI).

Technical Skills

Languages	Python, SQL, C/C++
Frameworks	FastAPI, Flask, PySpark, Pandas, Scrapy, BeautifulSoup, LangChain, LangGraph, LangSmith
Cloud	AWS (EC2, S3, Lambda, Kinesis, Glue, ECS, Redshift), GCP (BigQuery, GCS, Dataflow, Cloud Run, Pub/Sub)
Data & Orchestration	Apache Kafka, Apache Airflow, Apache Hive, Hadoop, Databricks, Data Warehousing
Tools & OS	Docker, Git, Charles Proxy, Frida, HTTP Toolkit, Playwright, Linux

Experience

MfilterIt — Ad-tech & E-commerce Data Intelligence Feb 2025 – Present
Software Development Engineer

- Design and operate distributed web and mobile scraping systems across **15+ platforms** using Frida, Charles Proxy, and HTTP Toolkit for Android API reverse engineering; achieving **99%+ scrape success rate** via intelligent proxy rotation and retry logic.
- Build and maintain PySpark-based ETL pipelines processing **20M+ records daily** across AWS (Lambda, S3, ECS, Kinesis) and GCP (BigQuery, GCS), cutting pipeline execution time by **35%**.
- Develop and expose backend REST APIs using FastAPI and Flask serving processed data to **5+ downstream client teams**, achieving sub-200ms average response latency.

Six Dee Netad Solutions Pvt Ltd April 2024 – August 2024
R&D Trainee

- Built an automation tool to detect and block fraudulent IP traffic in Bing Ads campaigns, reducing manual monitoring efforts by **70%** and improving invalid traffic (IVT) prevention accuracy.

Projects

AI Video Intelligence Pipeline 🗣️ May 2026
Python, LangChain, Groq, Mistral, ChromaDB, faster-whisper, HuggingFace

- Transcribes and analyzes YouTube/local media using **agentic AI workflows**, **LLM-powered map-reduce summarization**, and **multi-model orchestration** (GPT-4o, Claude 4, LLaMA 3.3 70B) for long-context content processing.
- Implemented a production-grade **RAG architecture** with **LangGraph**, **vector search**, **hybrid retrieval**, and modern embedding models; automatically generates summaries, action items, decisions, insights, and follow-up tasks from video content.

E-Commerce Availability Analytics ETL Pipeline 🗣️ Mar 2025 – Present
PySpark, GCS (Parquet), MySQL, Docker | MfilterIt

- Engineered a **distributed PySpark ETL workflow** over **180 days** of data lake and transactional sources (GCS Parquet + MySQL); delivered **8 inventory analytics metrics** across daily/7d/30d/90d windows, optimized for large-scale aggregation and packaged using **Docker** for reproducible execution.

Weapon-Target Assignment Optimization October 2024 – May 2025
DayalBagh Educational Institute, Agra

- Engineered a **C/C++ Genetic Algorithm (BRKGA)** for an NP-hard combinatorial assignment problem; custom crossover and mutation operators achieved **3× runtime efficiency** over baseline heuristics with improved solution quality.

Publications

- “The Mobile Healthcare Vehicle Traveling Salesman Problem with Constant Budget Constraint: Heuristics and Hybrid Evolutionary Algorithms” — *submitted to Journal of the Institution of Engineers (India) Series B, Springer.*

Education

DayalBagh Educational Institute, Agra 2021–2025
B.Tech in Electrical Engineering, Specialization: Computer Science 8.8 CGPA (Top 10%)
