Summary

SDE specializing in high-throughput data systems — distributed scraping infrastructure processing **20M+ URLs/day**, Kafka-driven multi-stage ETL pipelines across AWS and GCP, and cloud-native backend APIs. Experienced in mobile API reverse engineering (Frida, Charles Proxy) for large-scale multi-platform data extraction.

Technical Skills

Languages	Python, SQL, C/C++
Frameworks	FastAPI, Flask, PySpark, Pandas, Scrapy, BeautifulSoup, LangChain, LangGraph, LangSmith
Cloud	AWS (EC2, S3, Lambda, Kinesis, Glue, ECS, Redshift), GCP (BigQuery, GCS, Dataflow, Cloud Run, Pub/Sub)
Data & Orchestration	Apache Kafka, Apache Airflow, Apache Hive, Hadoop, Databricks, Data Warehousing
Tools & OS	Docker, Git, Charles Proxy, Frida, HTTP Toolkit, Playwright, Linux

Experience

MfilterIt — Ad-tech & E-commerce Data Intelligence
Software Development Engineer

Feb 2025 – Present

- Design and operate distributed web and mobile scraping systems across **15+ platforms** using Frida, Charles Proxy, and HTTP Toolkit for Android API reverse engineering; achieving **99%+ scrape success rate** via intelligent proxy rotation and retry logic.
- Build and maintain PySpark-based ETL pipelines processing **20M+ records daily** across AWS (Lambda, S3, ECS, Kinesis) and GCP (BigQuery, GCS), cutting pipeline execution time by **35%**.
- Develop and expose backend REST APIs using FastAPI and Flask serving processed data to **5+ downstream client teams**, achieving sub-200ms average response latency.

Six Dee Netad Solutions Pvt Ltd
R&D Trainee

April 2024 – August 2024

- Built an automation tool to detect and block fraudulent IP traffic in Bing Ads campaigns, reducing manual monitoring efforts by **70%** and improving invalid traffic (IVT) prevention accuracy.
- Automated campaign performance report generation and distribution using Python and Pandas, streamlining analytics workflows.

Projects

E-Commerce Availability Analytics ETL Pipeline
PySpark, GCS (Parquet), MySQL, Docker | MfilterIt

Mar 2025 – Present

- Built a **PySpark** ETL pipeline ingesting **180 days** of product availability Parquet files from **Google Cloud Storage** and live MySQL staging records via JDBC; enriched datasets with SKU, city, and product-title.
- Computed **8 analytical metrics** (OOS rate, competitor availability gap, dark store listing gaps, per-SKU trends) across **4 rolling time windows** (daily / 7d / 30d / 90d) for multiple brands, containerized with **Docker** for reproducible, environment-agnostic deployments.

Weapon-Target Assignment Optimization
DayalBagh Educational Institute, Agra

October 2024 – May 2025

- Engineered a **C/C++** optimization framework for an NP-hard large-scale combinatorial assignment problem; designed custom crossover and mutation operators within a Genetic Algorithm (BRKGA) achieving measurable gains in solution quality and **3×** runtime efficiency over baseline heuristics, with focus on performance-critical data structure design.

Publications

- “The Mobile Healthcare Vehicle Traveling Salesman Problem with Constant Budget Constraint: Heuristics and Hybrid Evolutionary Algorithms” — *submitted to* Journal of the Institution of Engineers (India) Series B, Springer.

Education

DayalBagh Educational Institute, Agra
B.Tech in Electrical Engineering, Specialization: Computer Science

2021–2025
8.8 CGPA (Top 10%)
