Objective

Cloud-focused Software and Data Engineer experienced in AWS and GCP, building ETL pipelines with Python, PySpark, and BigQuery. Skilled in backend development using Flask and JavaScript, with experience in batch and stream processing (Hadoop ecosystem, Apache Hive, Kafka), workflow orchestration (Apache Airflow), and the Databricks platform. Building generative-AI applications with LangChain, LangGraph, and LangSmith for observability and evaluation.

Skills

Languages Python, JavaScript, C/C++	OS Windows, Linux(2 year of exp.)
Modules PySpark, Pandas, Flask	Coding Domains DSA, OOPs, Backend & Data Engg.
Data platforms Apache Hive, Kafka, Apache Airflow	Non Technical Communication Skills, Analytical Skills,
GenAI / LLM LangChain, LangGraph, LangSmith	Problem-Solving
IDE VS code, Vim, Pycharm, Cursor	

Experience

MfilterIt <i>Software Developer Engineer</i>	June 2025 – Present
– Build and operate scalable web and mobile application scraping systems, including Android application reverse engineering. Design and maintain PySpark-based ETL pipelines to process high-volume scraped data across cloud platforms, leveraging GCP and AWS (Lambda, S3, ECS) for scalable, containerized, and serverless data processing.	
– Keywords: Python, Pyspark, AWS, GCP, SQL, DSA, APIs(Flask & Fastapi), Web/App Scraping	
Six Dee Netad Solutions Pvt Ltd <i>R & D Trainee</i>	April 2024 – August 2024
– Developed an automation tool for Bing Ads to detect and block fraudulent IP traffic, significantly reducing manual monitoring efforts by 70% and improving invalid traffic prevention. Additionally, automated report generation and distribution, streamlining campaign performance tracking.	
– Keywords: Python, Pandas, SQL, APIs	
DEI Summer Research Fellowship <i>Academic Intern</i>	June 2023 – November 2023
– Optimized disaster relief routing using Genetic Algorithms and K-means clustering, designing meta-heuristic solutions for complex problems like the Traveling Salesman Problem, and demonstrating notable gains in solution quality and computational efficiency.	
– Keywords: Python, Genetic Algorithms, Clustering, Optimization, DSA	

Projects

Distributed Data Extractor (Scrapers) <i>MfilterIt Software Development Engineer</i>	June 2025 – Present
– Built a distributed scrapers using AWS Lambda and EC2 capable of scraping 20M+ URLs in under 4 hours across Blinkit, Zepto, Instamart, Flipkart, Amazon, Careem Quick, and Noon Minutes etc.	
– Reverse-engineered mobile app and web APIs using Charles Proxy , Frida , HTTP Toolkit , and Android emulators; developed high-performance extractors with Request, BeautifulSoup.	
– Engineered fault-tolerant distributed scraping and ETL pipelines using Python and PySpark with intelligent proxy rotation, retry handling, and rate-limiting strategies, achieving 99%+ scrape success rate .	
– Keywords: Python,PySpark, AWS Lambda, EC2, Frida, API Reverse Engineering, Scrapy, BeautifulSoup, Proxy Rotation	
Weapon Target Assignment Problem <i>DayalBagh Educational Institute, Agra</i>	October 2024 – May 2025
– Developed a metaheuristic framework for the Static Weapon-Target Assignment Problem (SWTAP). The solution integrates a Biased Random-Key Genetic Algorithm (BRKGA) with tailored crossover and mutation operators, enabling flexible target assignments and computationally efficient optimization.	
– Keywords: C, C++, optimization, constraint satisfaction, runtime efficiency, data structures	

Publications

- Research paper titled "The Mobile Healthcare Vehicle Traveling Salesman Problem with Constant Budget Constraint: Heuristics and Hybrid Evolutionary Algorithms", under review, Journal of the Institute of Engineers (India) B, Springer.

Education

DayalBagh Educational Institute, Agra <i>Bachelor of Technology in Electrical Engineering</i> <i>Specialization: Computer Science</i>	2021-2025 8.8 CGPA (Among the top 10)
REI Intermediate College, Agra <i>Senior Secondary (PCM)</i>	2020-2021 97.2%
REI Intermediate College, Agra <i>High School</i>	2018-2019 95.5%
